

**Paving/Materials**

Paving and other site materials will be primarily natural. Since a majority of site paving is in the road system, we will explore the use of a permeable material (asphalt or concrete) to reduce the amount of run-off created. In the Village Center the street section incorporates a granite curb, while streets in the outlying areas are more rural in character with no curbs and planted swales to pick-up run-off. Sidewalks and other site paths will be sand-set bluestone, brick, concrete pavers or a combination of the proposed materials; concrete is used in less visible areas. Private residential terraces are sand-set bluestone, brick, or another similar material. Terraces at the hotel, winery, restaurants and other public buildings are a combination of mortared and sand-set stone. These terraces may incorporate other elements such as concrete or brick. Golf paths will be asphalt again; we will try to incorporate a permeable material. Bridges for the golf paths will be of natural materials such as stone or wood. Surface parking areas, which are minimal, will be of a similar paving as the site roads. Public areas like the Village Green or neighborhood parks will be furnished with the traditionally styled benches and trash receptacles. Bike racks will be located throughout the site, especially in the Village Center to encourage their use.
